

Toward a First “Interoperability” Event

ALTO WG Virtual Interim Meeting
Wed January 26, 2011

Context

- Several independent client/server implementations exist
 - What kind (BitTorrent, eMule, CDN...)? How many?
- ≠ Interoperability Testing Event
 - Despite approaching stability, specs will be likely still volatile
 - Hopefully some interoperability, full interoperability unlikely
- Proposal: something in between a “running code demo show” and an “ALTO-IT”
 - How would you define it?

Network Environment

- IETF network
 - Pro: public, open, the best network ever :-)
 - Con: simple topology, where to get info from?
- Internet (inc. IETF network)
 - Clients and servers can be deployed at home
- Simulated
 - Ideas?

Tools/Roles

- Mailing list?
- Wiki?
- Internet-Draft?
 - May be worth documenting the experience
- Periodic conf calls?

- Wiki admin?
- I-D editor?

Continue?

Today's Questions

- What kind of event?
 - I-T? Demo Show?
- How?
 - Real Internet? Simulated topology?
- Organization
 - Wiki? (Volunteers?)
 - Mailing list?
 - Periodic calls?
