Interworking ISDN Call Control User Information with SIP

draft-drage-cuss-sip-uui-isdn-01

Keith Drage

Charter requirements

- The group will produce:
  - An application usage specification for the ISDN UUI Service.

- Milestone
  - Nov 2011 ISDN UUI Service application usage specification to IESG (PS)

SIP level requirements

- To implement draft-ietf-cuss-sip-uui

- Define and use "uui-isdn"

- Limitation to INVITE and BYE methods

- Implicit initiation (presence in INVITE request)

- Single User-to-User header field per request or response

- No support of redirection requirements

Interworking gateway requirements

- No other UUI applications
- No checking of contents – has to assume that content is octet structured binary and that it has a usable ISDN protocol discriminator
- No direct use of "uui" option tag

Not currently included

- At the moment don't see any real security requirements – are there any?

- The document assumes registries for "app" and "content" header field parameters – are such registries desirable and will be created

Next steps

- Align with development of draft-ietf-cuss-uui

- Any reviews and comments to be incorporated

- Adopt a document as working group draft in support of charter milestone
